

FIELD SCOUT™

MOBILE BORE PLANNING APP

The Subsite® Field Scout app works with your Apple® and Android™ mobile device, allowing you to walk the intended bore path of your next job and record important waypoints and obstacles such as the entry pit, exit pit, and utility crossings.

Field Scout reduces the chance of errors by replacing pad and paper, and by giving you the ability to use GPS. Transcription errors are also minimized as Field Scout lets you share your plan electronically. From Field Scout, you can email your plan to a supervisor, owner, or client for approval or further action. You can send it to crew members to show what daylighting needs to be done. Best of all, you can upload your plan to the Commander™ 7 HDD Guidance Display with ScoutView™ for reference while boring. Planning with Field Scout reduces your risk and makes your drill time more efficient, improving profitability on every bore.

FIELD SCOUT™

MOBILE UTILITY MAPPING APP

FEATURES AND BENEFITS

SIMPLIFIES FORMAL PLANNING minimizing risk and making the actual drill time more effective and efficient.

CREATES A BASIC BORE PLAN before crew and equipment are on-site, saving time on the job, which makes bores more profitable.

ALLOWS YOU TO MARK critical points such as entry and exit pits, utility crossings, and more with distance information and depth.

GIVES YOU THE ABILITY TO TAKE PICTURES of utility markings and potholing and store/email those with the plan.

WORKS WITH GPS (optional) to reduce time spent making distance measurements.

EMAILS DIRECTLY from mobile device for approval, further action, or for the job file.

READS BEACON DIAGNOSTICS information via NFC.
